Review Information for Permit Number: 182410231

Review Discipline: BUILDING REVIEW
Code Year: IRC 2012
Review Number: 2936243
Reviewer:
Date of Review:
Comments:

No.	Recorded Date	Resolved Date	Comment
1	06/27/2019		The calculation provided is incomplete; Please submit the design calculations demonstrating the structural and geotechnical stability signed and sealed by a registered design professional licensed in commonwealth of Virginia. Calculation shall address the effect of any surcharges on the wall and shall use the following factures of safety: Sliding = 1.5, overturning =1.5, Global = 1.25 (for laboratory determined soil parameters), Global = 1.5 (for assumed soil parameter). Also calculation for deflection and allowable lateral movement is not provided. ****** 1/7/2020 Review Comment: Original seal and signature are required.
2	06/27/2019		Drawings, details and calculations shall bear an original signature, seal, and date of the responsible Virginia-licensed architect or professional engineer. Electronically submitted plans must contain an electronic signature with signature protection on each sheet or only the cover sheet provided it has a table of contents. For more information on signed and sealed drawing requirements, go to fairfaxcounty.gov and search for "sealed drawings." ****** 1/7/2020 Original seal and signature are required. Also why the plan and structural calculation have two different engineers name?
3	06/27/2019	01/07/2020	Plan submitted are not entirely readable. A better copy of the plan is needed for us to start the review. (see sheet S0-00 and sheet S0-01
4	06/27/2019		This is not a complete review.
5	06/27/2019		please provide calculation for the connection between the post and the lagging. **** 1/7/2020 Review Comment: the calculation provided did not include the connection.
6	06/27/2019		Draining system is missing. ***** 1/7/2020 Review Comment: Your response is not acceptable "Drainage will occur thru lagging". Please provide size and the location of the drainage pipe on the detail.
7	06/27/2019	01/07/2020	Guardrail detail is missing.
8	06/27/2019	01/07/2020	Provide calculation for the lagging.
9	06/27/2019		The acceptable design value for soil bearing capacity is 2000 PSF without soil report. Plan shows using 2500 psf. The design value for soil lateral pressure on the plan is 45 PCF, what is your base for using this value? The value of 60 PCF is acceptable without soil report. **** Please correct soil design parameter on the plan too. (see sheet S0-00)
10	01/07/2020		The job address is missing on the revised sheets. Also need original seal and signature.

To prepare for your resubmission, please note the following:

- A letter must be submitted with each discipline's re-review stating how and where each review comment has been addressed/resolved.
- Revised sheets must be dated, and revisions must be highlighted using clouding with revision symbols or other similar means.
- If replacing sheets, slip each new sheet in front of the original in the county set only, and mark the original "void."
- Minor corrections, signed and dated by the designer, can be made in pen on the original sheets. A designer may grant a designee permission to make the corrections provided a letter is submitted to the county listing the specific changes and granting authority by name to the individual.
- A resubmission fee is charged for each re-review for commercial plans and for the second and subsequent re-reviews for residential.
